

These define various default site preferences, including [access keys](#) and component sizes.

```
# Access keys - hold Alt (Windows) or Control (Mac) and # tap the indicated key
on your keyboard to trigger the # corresponding action. 'ak_edit' => 'e', # edit
page 'ak_history' => 'h', # page history 'ak_recentchanges' => 'c', # Recent
Changes 'ak_save' => 's', # save page 'ak_saveedit' => 'u', # save and keep
editing 'ak_preview' => 'p', # preview page 'ak_em' => 'i', # emphasized text
(italic) 'ak_strong' => 'b', # strong text (bold) # Editing components 'e_rows'
=> '20', # rows in edit textarea 'e_cols' => '70', # columns in edit textarea
'Site.EditForm' => 'Site.EditForm' # location of EditForm
```

If you'd like to customize these preferences, to create personal user (browser) preferences, make a copy of this page somewhere, preferably as Profiles.*insert_your_name_here*-Preferences, edit that page with your new preferred settings, and then select [Set Preferences of this Page](#) on the page containing your newly created settings. This sets a cookie on your browser which tells PmWiki where to find your personal preference settings.

To unset this cookie and revert to PmWiki's default preferences, select [Revert to PmWiki Default Preferences](#).

See also [Cookbook:UserConfigurations](#) about how to customise the edit form for personal use.
